

Linux pool-mining on low priority.

Attention: Read it completely before use.

Links to VRSC miners:

[Miners download page](#)

Procedure:

[↑]

In order to let your mining not interfere with other processes running on your PC, we'll need to deprioritize the mining process. This will result in your miner throttling down whenever your PC needs processing power. People have reported to be able to use CPU-heavy applications, like games, without the miner interfering, with this method.

Because the Verus wallet (GUI and CLI) does a lot more than mining, it is not recommended to use this for a solo-mining setup. This is tested on Verus NHEQminer and Verus CCMiner on Ubuntu 18.04.

First thing you will need is pool-mining software. The link is supplied above this procedure. Download your preferred miner, extract it to your preferred location and configure the batchfile with the pool of your choice and your own mining address.

Now we'll need to adjust the batchfile to run on low priority:

NHEQMINER:

- Run your miner as you normally would, with `nice -n 19` placed in front of the command you normally use, for example:

```
nice -n 19 ./nheqminer -v -l pool.verus.io:9999 -u RVjvbZuqSGLGDm1B9BFkbHWySPKEx4tfjQ.Donator -p x -t 6
```
- make sure you replace the pool (`pool.verus.io:9999`) with your preferred pool and the address (`RVjvbZuqSGLGDm1B9BFkbHWySPKEx4tfjQ`) with your own address. The address shown in this line is the veruscoin foundation donation address. If desired change the identifier (`Donator`) to a name that easily identifies the miner to you.

CCMINER:

- Run your miner as you normally would, with `nice -n 19` placed in front of the command you normally use, for example:

```
nice -n 19 ./ccminer -a verus -o stratum+tcp://pool.verus.io:9999 -u RVjvbZuqSGLGDm1B9BFkbHWySPKEx4tfjQ.Donator -t 6
```
- make sure you replace the pool (`stratum+tcp://pool.verus.io:9999`) with your preferred pool and the address (`RVjvbZuqSGLGDm1B9BFkbHWySPKEx4tfjQ`) with your own address. The address shown in this line is the veruscoin foundation donation address. If desired change the identifier (`Donator`) to a name that easily identifies the miner to you.
